FOAM PVC SHEET

🔍 Product Overview

Cox-Foam is a Foam PVC product offering an excellent surface finish for printing and application of vinyl. It maintains its appearance as an undecorated finish and is available in standard 3 & 5mm thickness and in Red, Blue, Green, Yellow colours. The colour Black is available in 3, 5, & 10mm.

Because of it light weight closed cell structure Foam PVC can be used for hanging signs, indoor displays, built up letters and brochure/leaflet holders.

White Foam PVC is a premium product developed specifically for the print industry. It displays printed colours with greater brightness and intensity. The finish is achieved by adhering to a strict surface quality supervision. The product is not only brighter, but smoother and its dimensions more uniform making it ideal for both screen and high quality digital printing displayed in the brochure. Polycarbonate constitutes a breakthrough in both design concept and construction methods. The sheets are manufactured to comply with European standard specifications.

🔍 Komacel®

Komacel® is a PVC sheet made by Kommerling using the "Celuka" extrusion process. The "Celuka" process gives the sheet a unique silk gloss finish. The surface is perfect as a stand-alone substrate in its natural state but also is perfect for printing and film/vinyl lamination and is available in thicknesses up to 30mm.

Komacel's unique shore hardness means it's surface will look better for longer and its closed cell structure ensures its effectiveness in external applications without the need for primers.
